

Genome coverage separates real detections from read pile-ups

3,220 runs across 73 host species (46% wheat), db_v3, species rank;
other taxa thinned to 25% for legibility. Of 124 Phakopsora/Melampsora detections above the line, 123 are the declaring study's own pathogen.

- *P. striiformis* (declared target)
- *P. triticina* (genuine secondary)
- ▲ Phakopsora / Melampsora
- all other taxa
