

Fungal co-infection guilds – field samples (high confidence)

Nodes = fungal pathogens; edges = co-occurrence in same field biosample (diff-genus secondaries only)
Node colour = fungal class; hulls = host plants spanning >= 3 nodes

Fungal Class

- Dothideomycetes
- Eurotiomycetes
- Leotiomycetes
- Pucciniomycetes
- Sordariomycetes
- Unknown
- Ustilaginomycetes

Co-occurrence Frequency

- 1
- 5
- 15
- 30

Pathogen Detections

- 5
- 15
- 30
- 60
- 80

Host Plant

- Hordeum vulgare
- Sorghum bicolor
- Triticum sp.
- Vitis vinifera
- Zea mays
